

First Lesson in Formal Grammar

Sunday, May 5, 2024

The first lesson in formal grammar is all about the foundation of the universal power of speech, itself. Speech is the method by which we manage the virtualization of behavior in order to predict results by which we can judge our best behavior for survival; i.e., the virtualization of the environment presents us with a cause, the effect is our behavior which is the results of judgment. We use these judgments to write back to our actual body, constructing our own behavior. Unlike the inanimate world, which is based on cause and effect, a form of life is based on cause and the choice of a beneficial effect; life manages the effect. Or one can say, the inanimate uses an arithmetic identity for response, while life uses a proportional identity for response. This ability affords us the benefit of a life support system, or one can say mechanism.

Virtualization, one can say metaphorically, is a mental image, i.e., memory, of perceptual information. Judgment is the prediction of the best behavioral response to that information. This is called by several names, rationalizing a life supporting response, or predictive behavior, or again, prophesy. Another important idea to comprehend, is that virtualization use of secondary information derived from a thing, thus isolating us, as a form of life, from the arithmetic cause and effect. There is lethal information, and non-lethal information. Virtualization isolates us from direct, and potentially lethal, contact with the environment.

Another concept is recursion. Cause and effect is always in the present, while memory allows us the recursive use of our virtualizations.

Now, we know why we use speech, let us give a concise outline of what I just laid down.

A brain is a physical object; thus, it is perceptible. The product of a functional brain is called Mind. A mind is not perceptible, it is intelligible, i.e., spiritual. Mind is a life support system. Mind, based on the power of prediction, is potentially the most powerful life support system possible for a form of life.

As mind, all we can do is read the environment with our body, which is called perception. We then use those perceptions as data which is processed to predict our best response to the environment. This is called conception. We then write back to the body our judgments producing our own behavior, which is called will. The process of using virtualizations in order to effect our behavior is called our soul, our spirit, or again, our personality, our psychology. Psychology is then commensurate with the principles of Language which are functionally resident in the mind as a Grammar Matrix.

Perception allows us a non-lethal interaction which we process virtually, in order to produce non-lethal behavior, resulting in the product of the most powerful life support system possible. Perception, using the body, is both lethal and non-lethal, a mind strips off the non-lethal to be used as the foundation of

judgment. Sight, sound, touch, taste, smell, are used to gather non-lethal perceptions.

What affords us the notion of speech is that every thing is comprised of some material difference, also called its behavior, within a shape or form, also called a container, or together, a standard of behavior i.e., this is a binary relationship. Stop, go, stop, off, on, off. Plato called this dialectic, speech originating as a binary. Today, we have the computer which shows the power of binary recursion.

This binary definition of a thing affords us a Grammar Matrix whose members have traditional names; Common Grammar, Arithmetic, Algebra and Geometry. These four represent the four possible methods of effecting binary recursion.

This binary affords us two, and only two, concepts of identity, arithmetic, based on the correlative, and geometric based on the relative. Arithmetic and geometric identity have other name pairs also, literal, for the arithmetic, and metaphorical for the geometric.

As Plato noted, we are born with the ability to compare, by the use of memory, two things. They will either be equal, or not equal. If they are not equal, one will be greater or less than the other. When we are functional, we are always aware that we compare using both types of identity. These identities are reciprocal and complementary. Thus, that although the results appear contradictory, we always have to keep in mind which of the two identities we are using for what.

The only power a mind has is the power of speech, it is the only power we are able to use and recognize. Thus, we read the universe, as speech. This leads to the fact we can only recognize the Universe as something spoken, via speech. Thus, metaphorically, it is wholly rational to say, that the absolute power of the Universe is the fact that its existence was spoken, i.e., originated from the Voice of God. Both religion and science originates in the power of speech; it is not one or the other, it is both in a reciprocal, and useful combination. Plato demonstrates how to use it in a push-pull configuration in order to effect life supporting behavior.

Now, to ponder the development of a greater expression of religion, and how it originates in speech, itself, then study Plato's *Phaedo*, where Socrates will take you step by step in the development of faith based on the intelligent recursion of the unit, or thing, or again, one.

To fear God, is what a mind evolved from, the power of the raw environment. This binary concept of speech means, quite factually, we cannot possibly have any other God than it. It is a physical and biological fact. If you are mentally dysfunctional, you are, by biological fact, dead anyway, so that it does not matter what you call speech, it is not factual, literate, speech.

Thus, it is a biological fact; our salvation, provided by potentially the most powerful life support system possible, depends upon hearing the Voice of God, and responding in accordance with the commandments, i.e., provable literate responses. It is not mythology; it is just how life works. In short, we listen to God, in order to produce scientific and provably life supporting behavior.

If you cannot follow the line of reasoning, do not worry about it, it will not do any good anyway. Not believing that the Universe is spoken, simply means that your mind is trapped in a self-referential fallacy, you deny your very own power as life. Science and Religion, by the very definition of a thing as speech, either go hand in hand, or not at all. You cannot understand Religion without Science, nor Science without Religion; our mind functions in accordance with both types of identity, or not at all. Science and Religion, by the principles of grammar, are a Conjugate Binary pair by which a functional mind is able to do its own work. In metaphor, this is the Marriage of the Lamb. Prior to becoming a literate species, both of these parts of speech have been used detrimentally, i.e., whored. The realization of what speech factually is, brings both of these into a proper, and sanctified, relationship, which can be called life supporting sane behavior. If you want to help save the world, this marriage must take place, as written.

Take your time with this first lesson in Formal Grammar. Only proceed when it finally sinks in.

Religion shows us how to understand, in terms of motivation, science shows us the power of processing via a Grammar Matrix. When you understand the motivation, then you can start learning the science of prophecy as a Grammar Matrix, the meat of prophecy.

Personally, my goal, all my life, has been this marriage. A woman is the life of man, i.e., his purpose. Adam and Eve are metaphors for both types of identity used to produce a functional mind and a species able to do its own work.
